**'PERFORMANCE EXCELLENCE'**

## **MORE CLUBHEAD SPEED & DISTANCE**

Some simple geometry, physics and mechanics for us to consider ... If we roll a 'Big Wheel', like a transport truck wheel and tire, (versus a small car wheel and tire) we get more efficiency and speed per revolution.

'Bigger Wheels' have more 'Circumference' than do smaller wheels and tires. (see 'Circumference = Pi X Diameter') Hence, they go farther per revolution and create relatively more velocity per revolution down the road. (see 'Drive Length vs. #Wedge Length')

We humans are a bit like this. The 'Bigger The Golf Wheel' we swing the more 'Clubhead and Ball Speed' we shall accomplish. This leads directly to increased 'Distance' ... a good golf thing! Ernie Els, at 6 feet 5 inches tall, with very long arms, makes more 'C/H Speed' more easily and efficiently than might a Corie Pavin or a Mike Wier, who are a much smaller stature.

Rorie McIlroy, who is not very tall, hits the ball a mile, but he does so with enormous 'Power' and efficient mechanics for his size. Pound per pound he is exceptionally long!

If you are a 'PUITA Hitter', ('Pick Up Inside Take Away'), with a 'Bent Target or Swing Elbow or Lever', you shall give up the spoke length ('Radius') of your 'Big Wheel'. This will reduce or sacrifice 'Clubhead Speed' and 'Distance'.

Interestingly, if you 'Sweep' your 'Clubhead' away, 'Out The Back Door', 'Deep, Flat & Wide', somewhat 'Up The Line', 'Pushing It Out' from your body, you shall create 'Width' and a 'Bigger Wheel'. (see 'Leverage, Arc and Width' ... 'LAW')

You may be a 'Float Loader' or an 'Up-Swing Wrist Cocker'. (see 'PUITA') That is a bit 'Manipulative' (conscious action), but common methodology. More naturally, with 'Width', you shall become 'Down Cocked' as the 'Lower Body Machine' ('LBM') fires its 'Potential Pivot Pressure Into Kinetic Energy'. The 'Big Wound Up Body Rubber Band' 'Leads' while the 'Upper Body Machine' ('UBM' – Hands & Arms – 'Lever Assemblies') 'Lag'.
