'PERFORMANCE EXCELLENCE'

CLUBHEAD LAG & DRAG

The Artificial Variety

'Iron Byron' does NOT create any artificial 'Lag & Drag'! It 'Loads & Releases' naturally! In fact 'The Machine' has no ability to 'Manipulate The Upper Body Machine' or what we refer to as 'The Lever Assembly'. (see ALSDR' – 'The Power Line Sequence' ... 'Accumulate, Load, Store, Deliver & Release')(see 'Hand, Wrist Hinge and Arm' ... also 'Universal Joint')

It is important to note that 'Iron Byron' has 'One Single Lever' with its 'Primary and Secondary Aspects'. The 'Primary Lever' is the machine arm and clamp. The 'Secondary Lever' is the actual 'Golf Club'. There is no separate 'Swinging and Hitting Lever'. Just one simple assembly!

There is currently a lot of talk and misguided profession about 'Holding Off The Brace Lever Release' to accomplish more 'Lag or Lag Angle'. Let me tell you emphatically that pursuing this allusive and wrong delayed release is a journey with no good destination. It immediately becomes 'Manipulation' and, as such, destroys or hampers natural motions. Your 'Grip Pressure' will vacillate unpredictably. This 'Tension Is A Killer'! You will soon own a deadly or terminal 'Flip-Handed Delivery' which you cannot control. Your swing will NOT repeat reliably. Your 'Timing, Tempo, Rhythm Cadence and Pace' shall pay the ultimate price for this ill-advised mechanical tasking. Golf is more "Let IT Happen" than "Make IT Happen"!

You will never be able to enjoy the magically physical fact of 'Delivering Your Golf Ball On Target With Your Brace Toe Pressure and Brace Leg Drive'. (see 'Swing Engine')(see 'Stage Three Procedure' - Punch or Full Swing - with its 'Wrist Cock & Pivot')

You will struggle with being 'On Path and On Plane'. Consistency will go far south! Your 'Ball Flight' creation and control shall be compromised. Your scores will balloon! Your happiness out there shall degrade miserably. You may even succumb to the 'Frustration Quotient' and simply quit!

Sad event!

"Welcome Aboard!"

"Enjoy The Ride!"
