'PERFORMANCE EXCELLENCE'

ON THE FLY!

If you can 'Master Golf Basics', which is very doable, you will sooner than later be able to fix your own errors 'On The Fly'! When you are growing early on in your pursuit of golf, learn to create curvature and straight lines before adding precise 'Quarter Sized Targets' and keeping score in a foursome, from the tips.

Now how stinking cool is that depressurized situation?

The 'Golf Ball' spins only three ways ... 1) Under or Back Spin ('2100 to 2500 RPM' depending on the loft selected), 2) Side Spin Right and 3) Side Spin Left ... 'Low & High Energy Side of the 'Target Line' respectively.

We must get a grip on 'Ball Curvature', in both directions, before we even undertake hitting targets at the end of our 'Ball Flight'. Just like our '555 Golf Clients' warm up 'Putting' before any other single activity. We complete the 'Down & Back Drill' to get moving and discover the 'Pace Of The Greens' even before we select a short 'Putting Target'. We start off by simply 'Rolling The Ball' ...nowhere in particular ... just releasing the 'Putter Head Through The Ball'!

When we accomplish this 'Bullet-Proof Drill', we then learn the speed of the greens ... an essential aspect of getting prepared to play! How fast are they! What 'Stimp'? The practice greens are supposed to be exactly like the greens on course.

Then, and only then, we start a full '8 Step Putting Pre Shot Routine' ('PSR') which rolls our 'Golf Ball' down a 'Ball Rolling Line' to a 'Target'. Rolling first! Somewhere second! If you screw with this 'Logic', 'SHE' will reach right up and grab your 'Clubhead' and play nasty tricks on your mind and game! Nasty tricks!

You cannot accomplish 'Feel and Then Get Mechanics'. You must conquer 'Mechanics' and translate that learned gift to 'Feel'. Once we are solid footed in this 'Straight and Curved', we can visualize a desired 'Ball Flight' and make it happen on demand! Fun follows!

"Welcome Aboard!"
